Jordan Rivera

Senior Python Developer | jordan.rivera@example.com | +1 (415) 555-0192

Summary

Senior Python developer with 8 years of experience building production APIs and AI-powered products. Deep expertise in FastAPI, asynchronous PostgreSQL, and retrieval-augmented generation with Pinecone. Led the migration of a legacy Django monolith into a modular FastAPI service and designed an LLM-based interview scoring pipeline used for 10,000+ candidate evaluations.

Skills

- Python, FastAPI, Pydantic, SQLAlchemy (async), Alembic
- PostgreSQL, Redis, RabbitMQ, Docker, Kubernetes
- Pinecone, sentence-transformers, RAG, vector search
- LLM integration (OpenAI, Anthropic), prompt engineering, structured output
- pytest, unit/integration testing, CI/CD (GitHub Actions)

Experience

Senior Backend Engineer -- DataForge AI (2021 -- Present)

- Designed and shipped an LLM evaluation service scoring structured responses on competency dimensions, with evidence extraction and composite score reconciliation.
- Built a document knowledge base pipeline: PDF ingestion, chunking, embedding, and per-department Pinecone namespaces with strict data isolation.
- Reduced p95 API latency by 40% by moving to async SQLAlchemy sessions and connection pooling.

Backend Engineer -- CloudScale Systems (2018 -- 2021)

- Built REST APIs with FastAPI and PostgreSQL; introduced JWT auth with refresh-token rotation.
- Wrote the internal testing framework used by 6 teams; raised backend coverage from 55% to 88%.

Education

B.S. Computer Science, University of Washington (2014 -- 2018). Focus: distributed systems and machine learning.

Notable Projects

- InterviewInsights -- open-source interview analysis tool that extracts behavioral evidence from transcripts and maps it to competency rubrics.
- VectorSearch Playbook -- internal guide on chunking strategies and namespace design for multi-tenant RAG systems.
